

Lab 7

Exercise 7.1

A supermarket chain has asked you to develop an automatic checkout system. All products are identifiable by means of a barcode and the product name. Groceries are either sold in packages or by weight. Packed goods have fixed prices. The price of groceries sold by weight is calculated by multiplying the weight by the current price per kilo.

Develop the classes needed to represent the products first and organize them hierarchically.

- The `Product` class, which contains generic information on all products (barcode, name, etc.), can be used as a base class.
- The `Product` class contains two data members of type `long` used for storing barcodes and the product name.
- Define a constructor with parameters for both data members. Add default values for the parameters to provide a default constructor for the class.
- In addition to the access methods `setCode()` and `getCode()`, also define the methods `scanner()` and `printer()`. For test purposes, these methods will simply output product data on screen or read the data of a product from the keyboard.
- The next step involves developing special cases of the `Product` class.
- Define two classes derived from `Product`, `PrepackedFood` and `FreshFood`. In addition to the product data, the `PrepackedFood` class should contain the unit price and the `FreshFood` class should contain a weight and a price per kilo as data members.
- In both classes define a constructor with parameters providing default-values for all data members. Use both the base and member initializer.
- Define the access methods needed for the new data members. Also redefine the methods `scanner()` and `printer()` to take the new data members into consideration.
- Test the various classes in a `main` function that creates two objects each of the types `Product`, `PrepackedFood` and `FreshFood`. One object of each type is fully initialized in the object definition. Use the default constructor to create the other object.
- Test the `get` and `set` methods and the `scanner()` method and display the products on screen.
